

Meeting Summary of June 26th, 2025

Date: June 26th, 2025

Time: 19:00–20:00 PM(PCT)

Attendees: Prof. Jan, Feng

Topic: Feng's report about the current status and guidance from Prof. Jan

Summary of Discussion

- Feng reported his practice about operating the ecological data set, including cleaning and merging sets from different time and spatial spaces.
- Feng shared a simplification of making clustering and regression on the merged data set, which gave some insights about the basic standards and concerns in analyzing biological data sets.
- Prof. Jan shared two new presentations. First is about the spatial analysis of microinvertebrate and other organisms of interest in Lake Erie. Second is about the usefulness of dendrogram in clustering analysis.

Decisions Made

- Feng will continue finishing the summary about the first three papers from Prof. Jan, about the application and constraints of quantile regression in ecological analysis, and go to practice clustering and dendrogram analysis on ecological data sets.
- Prof. Jan has interests in sharing another data set about Lake Erie with Feng, which was shown in his first presentation, and would send(already sent) another two helpful papers about Bio-assessment and threshold detection of ecological change.
- A weekly schedule is set on every Thursday at 19:00 PM(PCT) through Zoom. Prof. Jan and Feng will give it an exchange on Tuesday to see if the time is suitable.

Action Items

- Feng will submit the summary about the first three papers by June 29th.

Follow-Up

Temporary meeting time: next Thursday at 19:00 PM(PCT)

Supportive materials

A meeting recording was stored in Feng's laptop for reviewing.

Two new papers had been shared by Prof. Jan.
