

Meeting Summaries of October 16th 2025

Date: October 16th, 2025

Time: 8:00–8:35 PM(PDT)

Attendees: Dr.Jabed, Dr.Yue and Feng

Topic: Feng's report about the work done last week and plan for next steps

Summary of Discussion

- Feng gave a brief summary about the data examination and merging work on the two complete datasets(environmental, taxa) that were received on October 1st, and talked about how to merge the stressor data into it when it is available.
- Feng talked about the motivation of building codespace for the project, and the current codebase structure. The dependency problems were discussed and the solutions were identified by cutting down unnecessary modules and simplifying the codebase.
- Feng presented the motivation of using weighted PCA for pollution assessment under different scenarios(settings or weights), compared the grouping results with two examples(2006 results and 2025 results) to show the effectiveness of this method, and introduced the idea to identify it as a random variable in deciding if a site is reference or degraded.
- Dr. Jabed suggested to use objective methods to determine the weights/settings in the weighted PCA, there should be at least one metric that can support the choice of weights and their pollution assessment results.
- Dr. Jabed suggested Feng to revise the proposal based on the new comments, and add a front page to show title, author, supervisors'names and affiliations, and other relevant information. After that, Feng can search for the (TRU)program proposal approval form and the proposal work can be considered done, after everyone signs it.

Decisions Made

- The weighted PCA method and the view of pollution level quality as a random variable are not bad, worth further exploration.
- The proposal is generally good, only minor revisions are needed and no reports are required. After the revisions, it will be submitted soon.

Action Items

- Feng will revise the proposal based on the new comments, and add a front page to show title, author, supervisors'names and affiliations, and other relevant information.
- Feng will go to find the (TRU)program proposal approval form, sign and send it to supervisors for signatures.
- Feng will work on the codebase and the talked method, and organize the major work that have been done so far.

Follow-Up

Temporary meeting time: October 23th, 2025, 20:00–20:45 PM(PDT)

Supportive materials

- A meeting recording with subtitles has been restored at [Google Drive](#).
